## No more hassles locking and releasing the strings

All guitars with a standard double locking tremolo system suffer the same weakness: tuning stability is amazing but changing the strings is a real chore. That's why we developed the Finger Clamp System, which makes restringing a breeze. Check it out on the RGX620DZ and 520DZ models you'll never go back to the old way again. And this system's designed to handle hard playing, so you'll stay in tune no matter how heavy the action gets.

## RGX620DZ, 520DZ

We're always looking for new ways to improve our guitars. Take the conventional Floyd Rose string locking system, for example. Sure, it keeps the guitar in tune even during the most intense rock sessions, but it also has its weak points. Every time you need to retune or change strings you have to tighten or loosen multiple screws, requiring a number of wrenches of different sizes. Add to this the hassle of cutting ball ends from strings and you see where we're coming from.

# RGX420DZ/220DZ

Combining standard double locking tremolo systems and custom high-output humbuckers made to suit after construction and rich, custom finishes, these guitars offer powerful, distinctive sounds to meet the needs of today's guitarist.

### The new Finger Clamp System – RGX620DZ/520DZ

The new Finger Clamp System (patent pending) developed by Yamaha solves all of these problems in a single stroke. This innovative mechanism allows you to lock and release the strings at the fur and bridge with one finger and no tools. Here's how easy it is to use:

- 1) Release the lock at the nut. (2) Push back against the lock at the nut.
- 2) Push back against the lock at the nut.
- 3) Push back against the lock at the nut.
- 4) Push back against the lock at the nut.
- 5) Push back against the lock at the nut.
- 6) Push back against the lock at the nut.
- 7) Push back against the lock at the nut.
- 8) Push back against the lock at the nut.
- 9) Push back against the lock at the nut.
- 10) Push back against the lock at the nut.
